

Unit 2. E-Commerce Requisitions

Lessons. This unit contains the following lessons:

- 2.1. Defense Logistics Agency (DLA)
- 2.2. Electronic Catalog (ECAT) Requisitions
- 2.3. Prime Vendor (PV) Requisitions

Lesson 2.1. Defense Logistics Agency (DLA)

Introduction. This lesson provides an overview on the Defense Logistics Agency (DLA).

Objectives.

- 2.1.1. Describe DLA Troop Support applications.
- 2.1.2. Examine DLA Troop Support – Medical Supply Chain applications.

Topic: DLA Troop Support Applications

The Defense Logistics Agency (DLA) is the logistics support agency for the Department of Defense (DoD). Its main purpose is to manage the global supply chain for the Army, Navy, Air Force, Marine Corps, other federal agencies, and allied nations. DLA is responsible for negotiating and managing the complex, large-scale contracts for major procurement programs DoD-wide. By centralizing these agreements worldwide, DLA secures favorable pricing and standardized terms, which is why these are the primary and most cost-effective purchasing channels used across the DoD.

Medical Supply Chain (MSC) Mission

This is the official website for the DLA Troop Support Medical Supply Chain. Our mission is to provide the military medical community the products and services needed every day for every crisis around the world. Our goal is to provide our customers and commercial trading partners a convenient, state-of-the-art, readily accessible web Portal that enables them to efficiently and effectively accomplish their business.

BRUCE ARGUETA
COL, MS, USA
Director, Medical Supply Chain

While DLA offers >100 web-based applications, medical logisticians primarily use a small set of key tools that work together to manage procurement. (<https://www.dla.mil/Working-With->

[DLA/Applications/](#)). The two most common applications medical logisticians will use in the DLA-MSC website are:

- Electronic Catalog (ECAT) Program
- Medical Master Catalog (MMC)

Topic: DLA Troop Support – Medical Supply Chain applications

Electronic Catalog (ECAT)

ECAT is one of the primary DLA Troop Support applications for procuring medical supplies. It is a web-based system designed to automate and streamline the entire procurement process. Within the DMLSS system, ECAT orders are identified by the Source of Supply (SOS) code 'ECT'. (<https://www.medical.dla.mil/Portal/ECAT/EcatHome>)

Key Purpose & Financial Benefits

- **Cost Savings:** DLA contracting specialists negotiate a "Total Delivered Price," which includes the item cost, transportation, and all administrative fees. This makes ECAT the preferred and more cost-effective method over a GPC purchase.
- **Efficiency:** ECAT automates the full procurement cycle from search to payment which reduces the administrative workload.
- **Direct Billing:** DLA bills the finance office directly for all ECAT orders processed through DMLSS. Logistics personnel should never pay an invoice from an ECAT vendor.

Ordering Process and System Interface

- **Primary System:** The DMLSS system is the preferred interface for using ECAT.
- **"Fill or Kill" Policy:** ECAT orders are processed on a "fill or kill" basis. The vendor must ship the complete order instantly, or the order is canceled.
 - Exception: Dental products may be shipped partially.
- **Status Updates:** ECAT provides electronic status in DMLSS of vendor acceptance within 24 hours.
- **Reports:** Users can request reports from the ECAT website for up to 2 years.
 - *Some examples: Order Status Report, Customer Spend Report, "Killed" Orders Report*

Products and Delivery

- Product Categories: Medical, Optical, Laboratory, and Dental supplies
- Emergency Orders: Only permitted for laboratory products
- Partial Shipment: Only permitted for dental products
- Guaranteed Delivery:
 - CONUS: Within 3 days
 - OCONUS: Within 7 to 14 days

Medical Master Catalog (MMC)

The MMC is a comprehensive research and sourcing tool, not an ordering system. Its purpose is to act as a centralized database that allows users to find product information and determine the best way to purchase an item.

(<https://www.medical.dla.mil/Portal/Homepages/MedicalMasterCatalog>)

Core Capabilities

- Product Search: A sophisticated search engine to find specific products.
- Detailed Information: The MMC provides a wealth of cross-reference data, including associated NSNs, equivalent products, and part number to PVON lookups.
- Product Sourcing: After finding a product, a user can run a sourcing request against their DoDAAC. The MMC returns a personalized list of all available purchasing options, specifying:
 - Which program to use (Prime Vendor, ECAT, etc.).
 - The required ordering numbers (PVON, NDC).
 - The exact price is available to that customer.
