

Lesson 2.2. Electronic Catalog (ECAT) Requisitions

Objectives.

- 2.2.1. Process ECAT requisitions in AIS.

Topic: Log Orders

LOG Orders is used to replenish operating inventory and to purchase supplies needed to fulfill customer requirements. DMLSS assembles all pending requirements and populates LOG Orders.

DMLSS sorts all potential orders according to the SOS code. While viewing the LOG Orders window, DMLSS locks the order, this means that no other user may open that order. Once an SOS is selected, DMLSS locks the item, validates, and builds the order(s).

An order summary is visible for each source. The Order Summary window provides summary details for each source to include total lines, total value, exceptions, controlled item class, call number, auto call indicator, and delivery method.

DMLSS/Inventory Management - [Build Orders: Order Summary]

Execute Refresh Exception Report Detail SOS Close Help Top

Exceptions must be resolved prior to executing an order. A check in the exceptions box identifies line items requiring attention. The Exception Detail window provides an explanation of why there is an exception on the order.

Exception Item ID	Exception	Exception Description
6530013714321		Duein Product is not currently available for purchase under the DLA Electronic Catalog program an alternative Source of Supply must be selected

The exceptions box is unmarked once the exception is resolved. Execute the order once all exceptions are resolved. Using the Execute button on the vertical toolbar allows DMLSS to process the order as identified in the Submission tab of the SOS record. When the Submit Progress for Exception Started window appears, verify the order was completed and submitted successfully then close the window.

Submit Progress for Execution Started: 1/13/2026 13:38:14

Topic: ECAT Requisitions

ECAT can be accessed either through DMLSS or directly through the web interface. DMLSS is the preferred interface for Air Force MTF's. The ECAT website is used mainly for research purposes or to correct catalog errors. To process an ECAT order, choose the SOS 'ECT' from LOG orders.

Lesson Activity

Follow your instructor's directions to practice processing ECAT requisitions in AIS.

Processing ECAT LOG Orders	
Steps	Action
1.	On the Vertical toolbar click Log orders
2.	In the SOS Selection window, select the SOS(s) for the order(s) you want to execute. ECAT begins with ECT.
3.	Click OK
4.	In the Build Orders: Order Summary window, select the order(s) you want to execute. Double click or select Detail from the vertical toolbar.
5.	In the Build Orders: Order Detail window, verify the: - Contract info - Priority Code - Qty - U/P - U/P Price
6.	Click Save and then click Close.
7.	Select the order. Click Execute.
8.	In the Submit Progress for Execution Started window, review the current order processing information to ensure it states successful. A DD Form 1155 will NOT print.
9.	Click Close
